

Production Services

Advanced Technology Laboratories, Incorporated, is a Pennsylvania corporation that specializes in the design, development, and production of electronic and electromechanical systems. Since its inception in 1976, the company has consistently applied advanced techniques to give its customers a competitive edge in their complex business environments.

New-Product Design

- Cost-impact analyses
- Functional specification generation
- Production documentation generation
- Printed circuit board design and layout
- Microprocessor-based design
- Prototype construction

Production

- Low/high volume production runs
- Electromechanical assembly
- Component procurement

Existing Product Support

- Infusion of new technology into existing products
- Production improvement
- Design reviews
- Documentation generation

Testing

- Testing of fabricated printed circuit boards
- Microprocessor-based test system design
- Short-run test technique development

ATL applies tomorrow's technology today
